Buttkicker LFE Low Frequency Effects Transducers

The ButtKicker LFE utilizes a patented magnetic suspension which can be used under couches, theater seating, platforms, and any type of structure as a silent subwoofer. The ButtKicker accurately reproduces the "feeling" range of many natural and man-made deep bass sounds. Different from other shakers or tactile transducers that use voice coil technology, the ButtKicker is much more powerful, more musical (linear) and offers true infrasonic or low frequency response with their resonant frequency of 9 Hz and range of 5 - 200 Hz. One ButtKicker LFE will easily replace 2 - 4 or more of the other types of shakers previously available, and is virtually indestructible and maintenance free. Power Handling 400 watts min / 1500 watts max. Also available in a kit with low frequency amplifier and mounting accessory kit. "Feel what you've been missing!" LIST

HKS4.....*149.00*

CALL FOR PRICE

DPR2005

Harman Kardon DPR1005/DPR2005 Receiver

Harman Kardon's DPR2005 and DPR1005 use the latest design technologies for Pulse Width Modulation (PWM) digital amplifiers to deliver high power output with superior low impedance drive capability, enabling the receivers to drive even the most difficult loudspeaker loads to ample volume levels. The DPR 2005 provides 7 x 120 watts power output (into 8 ohms, 20Hz – 20 kHz, <0.15% THD, all channels driven) while the DPR 1005 delivers 7 x 70 watts (into 8 ohms, 20 Hz – 20 kHz, <0.15% THD, all channels driven). A further advantage of the DPR system is that it is more efficient than conventional amplifier designs, converting more electrical power into usable amplifier power. As a result, the DPR 2005 and DPR 1005 are more compact than conventional A/V receivers, allowing them to be used in locations where larger audio/video components could not be accommodated. LIST
